

## ABSTRACT OF THE DISCLOSURE

A signal transmission method and apparatus is to provide results of user inputs such as changing setting of appliances transmitting digital AV contents as real-time and by a more precise method. To achieve the object, there is provided a method for transmitting the digital AV contents and OSD by connecting a signal output apparatus 100 and a signal input apparatus 200 comprising a process of identifying whether OSD display mode is set or not, a process of judging whether the volume of OSD is larger than a certain volume if the OSD display mode is set, and a process of transmitting the OSD through an analog connect if the volume of the OSD is larger than a certain volume.
